

PRODUCT GUIDE

FLEX Surfing

Flexsurfing is a Danish company with a unique patented Danish design. The company was established in 2012 and has been producing quality wave boards ever since. Knowing that the street board market has grown exponentially in the last few years, we are proud of the fact that we have the most long-lasting wave board on the market.

The Flexboard is unique due to its special design but also because of our passion for wave boarding. We are thrilled every time we see a rider on a Flexboard – especially from the fact, that our wave board will last.

Board design

The Flexsurfing wave board differentiates from other wave boards thanks to its unique Danish patented design. Between the wheels, you will find the flexible torsion bar, that supports and helps the movement which creates

momentum for the ride. With the wheel sockets mounted directly on the torsion bar, we have created a faster ride with better steering than anyone else in the market. This unique construction makes the board almost unbreakable.

360 Degrees rotation

The Flexsurfing wave board is unique in its design and the wheel sockets are made to allow full 360 degree rotation.

Surfing Sensation All Year Around

With the Flexsurfing Flexboard you can experience the true surf feeling without being dependent on waves and sunshine.

Easy and fun to ride

Anyone can become a competent Flexsurfer with the boards intuitive and easy learning curve. Jump directly into the fun!

Improved grip

The Flexsurfing wave board has more grip fields on its plates than any other wave boards. This provides a better control and a more confident ride. This feature enhances control of the board under both riding and stunts.
